

## DIAMON-FUSION® MAINTENANCE FACT SHEET

Diamon-Fusion® is an award winning innovative technology that protects silica based surfaces such as glass. It was developed to substantially reduce, NOT eliminate, the time and effort needed to maintain those surfaces.

Glass treated with Diamon-Fusion® is guaranteed for a period of 5 years to remain water repellent and stain resistant, as long as basic maintenance recommendations are followed and no harsh or abrasive cleaners are used. Diamon-Fusion® is guaranteed not to fade, peel or chip from the surface or discolor the surface to which it is applied for the lifetime of the glass.

In the event of failure, CB Showers will, at its discretion retreat the affected area or give a pro-rated credit towards its retreatment. The warranty does not cover deterioration caused by improper handling or extreme applications, nor does it cover any labor costs involved in the removal, replacement or access of the affected surface(s).

### BASIC MAINTENANCE RECOMMENDATIONS

In most cases all that is required to maintain the treated glass is a splash of clean cool water **after each shower** and an occasional swipe with a body scrubber (similar to the one used with soft soap for your skin). Simply pour the water along the edge of the glass and most of the soapy residu will run off. A soft dry wasgcloth will dry the few drop of water that gravity hasn't removed. A squeegee may be used but is not necessary and may require more frequent revitalizing.

If you notice a build up of water spots, or **once a month**, lightly scrub with a wet body scrubber rubbing in circular motion. Then rinse as before. Should the glass become considerably stained from hard water or lack of regular maintenance, Diamon-Fusion®'s **Restoration Powder** can be used to clean the surface using a wet cloth and light pressure, without damaging the Diamon-Fusion® coating. Then spraying with the Diamon-Fusion® **Revitalizer** will bring the glass to its original sheen. All products needed to recondition your glass when the repellency begins to wane, can be found in Diamon-Fusion®'s maintenance kit. Similar to a 3000 mile oil change on your car which keep the engine lasting for years, this simple maintenance holds true for Diamon-Fusion® treated glass. It will assure a clear and easy to clean surface for many years to come.

On etched and sandblasted glass, Diamon-Fusion®'s ability to prevent fingerprint stains on the surface after it's treatment is relative to the depth and coarseness of the etch. To maintain the etched surface, gently clean with soft, lint-free cloth, using non-ammonia based glass cleaners or Diamon-Fusion®'s specially designed glass cleaner. Do NOT use highly abrasive pads or cleansers.
